

WAVEANALYZER™

Family of Optical Spectrum Analyzers

The WaveAnalyzer™ family of Optical Spectrum Analyzers is designed for researchers and engineers working in research labs on advanced concepts of optical transmission systems as well as for technicians on the manufacturing floor aiming for high throughput of their devices under test.

The WaveAnalyzer family uses a heterodyne measurement principle in which a fast sweeping laser, serving as local oscillator (LO), is scanning across the wavelength range of interest. The beat signal, generated by mixing the local oscillator signal with the signal under test, is detected by a Polarization Multiplex Receiver. The fast sweeping Modulated Grating Y-branch laser is electronically tuned so the instrument does not contain any moving parts (except the fan in the WaveAnalyzer 400A and 1500S).

This measurement principle provides a unique combination of measurement performance and speed. All members of the WaveAnalyzer family can provide highest spectral resolution and maximum measurement (sweep) speed at the same time. For example, the WaveAnalyzer (WA) 1500S provides a resolution bandwidth of 180 MHz (about 1.4 pm) while taking measurements with update rates of up to 10 sweeps per second.

Software Package

- Graphical User Interface (GUI) included, which controls the WA 200A, the WA 400A, and the WA 1500S
- GUI serves as a viewer for measurement traces taken with the WA 200A
- WaveAnalyzer Analysis Server included, which provides comprehensive analysis capabilities on measurement data taken with all WaveAnalyzer instruments
- Server can be accessed via a RESTful http based Application Programming Interface (API)
- Runs on Windows 10
- Available for download at www.ii-vi.com/instruments

WaveAnalyzer 200A

Portable Optical Spectrum Analyzer

The WaveAnalyzer 200A is a lightweight portable Optical Spectrum Analyzer covering the C-band of optical communications. It has been designed for flexible use in the laboratory and also during installation, turn up and trouble shooting of optical networks in telecom and datacenter applications. Automatic ranging allows signals from +20 dBm to -50 dBm to be characterized without adjusting settings or adding attenuators. The instrument is controlled via touch-screen using Coherent's WaveAnalyzer GUI. A protective rubber bumper comes along with the instrument allowing operation of the unit in rugged environments.

The WA 200A is based on a coherent measurement principle which allows operation without any moving part inside the instrument.

Features

- Full C-band coverage
- Resolution bandwidth: 1.75 GHz
- Fast: 2 updates / second
- Battery operated
- Remote Control via Ethernet
- Language support (incl. Japanese and Chinese)
- No moving parts

Applications

- System turn up and trouble shooting
- DWDM testing
- Channel power and OSNR testing
- Channel equalizing
- Lab, network and data center

Language Support

The WA 200A includes localized GUI with language support for English, Japanese, Chinese and Italian.

Ruggedness

A special protective bumper ensures the integrity of the instrument even in rugged environments or when dropped on the floor. The instrument comes in a hard-shell case proving protection during transportation and shipment.

Control

The WA 200A can be connected through an Ethernet port to Local Area Networks and allows signal monitoring and data gathering or simply remotely controlling either via the internal webserver which can be accessed by any browser or through the integrated RESTful API. The WA 200A supports both acquiring the IP address through DHCP and setting a fixed address. The USB port allows time-stamped data to be saved for later analysis when no network is available.

The WA 200A integrates with Coherent's well-known WaveAnalyzer PC software. The WaveAnalyzer GUI serves as PC based viewer for measurement traces collected on the WA 200A.

In-built Signal Analysis

The WA 200A provides full channel analysis of 50 and 100 GHz channels, as well as supporting proposed non-standard channel spacings such as 37.5 GHz for future high-capacity 400 Gb/s interconnects. Reporting includes channel power, center frequency and OSNR measurements.

Onscreen Help

The WA 200A includes a detailed Onscreen Help function, which supports the user in all important measurement tasks.

Measurement

The screenshots show measurements taken with the WaveAnalyzer 200A on DWDM channels across the C-band.

Modulation sidebands on signals modulated with 10 Gb/s can be identified on the channel in the center and on the left; the channel on the right has been shaped out of an ASE signal

WaveAnalyzer 200A Specifications

Spectral	Frequency Range	191.1 to 196.2 THz (1527.8 to 1568.8 nm)
	Spectral Sampling Resolution	312.5 MHz
	Resolution Bandwidth (FWHM)	1.75 GHz (15 pm)
	Absolute Frequency Accuracy (1)	+/- 1 GHz
	Frequency Repeatability (sweep to sweep)	200 MHz
	Measurement Update Rate Full C-band scan	2 updates / s
Power	Max Total Power	27 dBm
	Max Power Density	+11.5 dBm / 1.75 MHz
	Noise floor	-58.5 dBm / 1.75 GHz
	Relative Power Accuracy	+/-0.5 dB (2)
Mechanical, Electrical and Environment	Operating Temperature	5°C to 35°C
	Operating Humidity	10% to 85%
	Communications Interface	Ethernet, USB 2.0 (master)
	Power Consumption (3)	100 V - 240 V; 40 VA
	Connector Type	FC/APC, LC/PC
	Size Instrument only	255 mm x 140 mm x 30 mm
	instrument including protective bumper	273 mm x 168 mm x 50 mm
	Weight Instrument only	1.25 kg
	instrument including protective bumper	1.5 kg

Notes:

- (1) Valid within recommended recalibration period
- (2) Guaranteed when using an ASE source
- (3) Condition: Battery is charging and instrument is operated

WaveAnalyzer 400A

Optical Spectrum Analyzer

The WaveAnalyzer 400A is a compact Optical Spectrum Analyzer for testing optical signals in the C-, in the Super C- and in the C+L band of optical communications. The instrument has been designed for Research & Development purposes as well as for Production Applications.

- The WA 400A uses coherent detection technology and can display the x- and the y-Polarization separately.
- The instrument is very compact with only half a rack width and a height of 1U.
- The detachable sub-panel on the front allows easy cleaning of the internal connector.

The WA 400A can be connected through an Ethernet port to Local Area Networks and allows signal monitoring and data gathering or simply remotely controlling either via the internal webserver which can be accessed by any browser or through the integrated RESTful Application Programming Interface (API). The WA 400A supports both acquiring the IP address through DHCP and setting a fixed address.

Features

- Product versions available for
 - C-band
 - Super C-band
 - C+L band
- Resolution bandwidth: <500 MHz
- Fast: 2 scans / second
- Dual Polarization detection
- Ethernet Interface
- Internal WebServer
- Compact, no moving parts

The WA 400A integrates with Coherent's well-known WaveAnalyzer PC software. This package offers a variety of analysis functions including Optical Signal to Noise Ratio (OSNR) measurement, Side Mode Suppression Ratio (SMSR) measurement, Multi-Channel (WDM-) Analysis, Peak detection, etc.

The WA 400A offers a resolution bandwidth down to 500 MHz (Full Width Half Maximum). This allows display of fine spectral details like modulation sidebands as well as measurement of the noise floor between densely spaced channels – as shown in the measurement trace below. The coherent detection technology of the instrument provides separate measurements of the x- and the y-polarization – supporting analysis of dual polarization transmission schemes.

Applications

- Optical system test
- DWDM testing
- Channel power and OSNR testing
- Production floor: High throughput
- component test

50 GHz spaced 10G DWDM channels modulated with a PRBS of 231-1 bits. The high resolution capability of the WA 400A allows accurate measurement of the noise floor between the channels.

WaveAnalyzer 400A Specifications (preliminary)

Specifications are guaranteed except where stated as typical (typ).

		WA 400A / C-band	WA 400A / Super C-band	WA 400A / C+L band
Spectral	Frequency Range	191.1 to 196.2 THz (1527.8 to 1568.8 nm)	190.623 to 196.727 THz (1523.9 to 1572.7 nm)	186.2 to 196.2 THz (1527.8 to 1610.05 nm)
	Resolution Bandwidth (FWHM)	500 MHz		
	Absolute Frequency Accuracy (1)	+/- 1 GHz		
	Frequency Repeatability (sweep to sweep)	200 MHz		
	Measurement Update Rate Full scan	2 updates / s		
Power	Max Total Power	27 dBm		
	Max Power Density	+11.5 dBm / 1.75 GHz	+14.5 dBm / 1.75 GHz	
	Noise floor	-57.5 dBm / 1.75 GHz	-54.5 dBm / 1.75 GHz	
	Relative Power Accuracy	+/-0.5 dB (2)		
Mechanical, Electrical & Environment	Operating Temperature	15°C to 35°C		
	Operating Humidity	10% to 85%		
	Communications Interface	Ethernet		
	Power Consumption	100 V - 240 V; <20 VA		
	Connector Type	FC/APC		
	Size (width x depth x height)	221 mm x 221 mm x 44 mm (height with feet: 51 mm)		
	Weight	1.5 kg		

Notes:

(1) Valid within recommended recalibration period

(2) Guaranteed when using an ASE source and setting Resolution Bandwidth to 1.75 GHz

WaveAnalyzer 1500S

High Resolution Optical Spectrum Analyzer

The WaveAnalyzer 1500S Optical Spectrum Analyzer is a real-time, very-high-resolution optical spectrum analyzer for R&D and production test applications. Based on Coherent's fast-stepping solid-state laser, the WA 1500S uses coherent detection techniques to achieve an outstanding combination of resolution, dynamic range and measurement speed. Instrument versions are available for C- and L-bands.

This next-generation Optical Spectrum Analyzer provides spectral measurements with sub-pm resolution at an update rate of 4 measurements per second across the entire C- or L-band. Scanning across smaller spectral regions is even faster, with update rates of over 10 measurements per second across any 200 GHz window, enabling interactive adjustment of optical components and systems.

The WaveAnalyzer's coherent receiver provides polarization resolved data of the signal while its two input ports, for different power levels, ensures coverage of a large range of optical input signals. Low power single channel signals can be analyzed as accurately as high power WDM signals.

The WA 1500S is very compact and rugged, as it contains no moving parts. It is controlled using a USB or Ethernet connection to a Windows-based computer which runs Coherent's WaveAnalyzer software package.

Features

- High spectral resolution
- Real time measurement
- Instrument versions for C-band and for L-band available
- Update rate:
 - 4 Hz for full C- or L-band scan
 - 10 Hz for scan across any 200 GHz window
- Spurious-free dynamic range > 50 dB
- External trigger
- Internal web server

Applications

- High-resolution spectral analysis on optical components
- OSNR measurements
- Modulation analysis on optical signals
- Modulator test
- Modulator bias and polarization adjustments
- Transceiver test
- Side-mode Suppression Ratio (SMSR) measurements
- Network monitoring
- General purpose spectral analysis in optical labs

Block diagram of WaveAnalyzer system

Measurement

The WA 1500S supports spectral measurement applications in various domains, including communications and pulsed lasers, as shown in the examples below.

WaveAnalyzer 1500S Specifications

Model		WA 1500S / C-Band	WA 1500S / L-Band
Spectral	Frequency Range	191.05 to 196.35 THz (1526.8 to 1569.1 nm)	186.0 to 191.05 THz (1569.1 to 1611.7 nm)
	Spectral Sampling Resolution	20 MHz	
	Resolution Bandwidth (FWHM)	180 MHz (typ.)	
	Absolute Frequency Accuracy (1)	+/- 500 MHz	
	Frequency Repeatability (sweep to sweep)	50 MHz	
	Measurement Update Rate (2): Full C- or L-band scan Scan across any 200 GHz window	4 updates / s 10 updates / s	
Power	Max Total Power	23 dBm (3 dBm for "3 dBm max" optical input)	
	Max Power Density	0 dBm / 20 MHz	
	Relative Power Accuracy	+/-0.2 dB (4)	
	Spurious Free Dynamic Range (1)	> 50 dB	
	Close-In Dynamic Range (5)	> 38 dB @ +/- 2 GHz	
Mechanical, Electrical and Environment	Operating Temperature	15°C to 35°C	
	Operating Humidity	10% to 85%	
	Communications Interface	USB 2.0, Ethernet	
	Trigger Input	TTL (SMA)	
	Trigger Output	TTL (SMA)	
	Power Consumption	100 V - 240 V; 20 VA	
	Connector Type	FC/APC	
	Size	241 mm x 88 mm x 316 mm	
	Weight	< 4 kg	

Notes:

- (1) Valid within recommended recalibration period
 (2) Requires a PC with at least an i7 processor or equivalent and a Gigabit Ethernet connection
 (3) Specifications valid on the "23 dBm max" optical port, except where stated differently
 (4) Guaranteed when using an ASE source
 (5) When measuring on one optical channel

Part Number	Description
WA-AA-1500S-ZZ-H	WaveAnalyzer 1500S, bench-top, C-band
WA-AA-1500S-RM-H	WaveAnalyzer 1500S, rack-mount, C-band
WA-AA-1500S-L-H	WaveAnalyzer 1500S, bench-top, L-band

WaveAnalyzer GUI

Measurement Analysis Functions

The PC based GUI package offers various analysis functions:

The **3-point-measurement** allows very simple and quick OSNR measurements using the traditional approach in which a 0.1 nm resolution bandwidth measurement scan is taken from which the noise and the signal powers are estimated.

The **advanced 6-point-measurement** allows OSNR measurements even between densely spaced channels, see figure on the right. The measurement bands can be precisely adjusted to capture the noise floor and the signal accurately.

The **polarization extinction ratio** method allows in-band OSNR measurements, provided the optical signal is single polarization only (which can be verified with the WaveAnalyzer instrument).

The **sequential measurement** method supports in-band OSNR measurements of dual-polarization signals.

The **Multi Channel Analysis** function provides measurements of the OSNR, channel power and channel center frequency of all channels simultaneously with an update rate of up to 10 Hz, depending on scan range. For documentation or further analysis, the results can be exported in a table.

The **Wavelength Meter** function provides fast measurements of the power and the wavelength of multiple narrow band signals. It can measure several hundred lines simultaneously and provides a wavelength accuracy which is similar to dedicated wavelength meters.

6-point OSNR measurement

Multi Channel Analysis

Wavelength Meter

Markers

The user interface contains a powerful marker scheme which supports further analysis capabilities, like peak detection, display of difference frequencies and integrated power in user definable frequency ranges.

Interfacing

The user can connect to the WaveAnalyzer in point-to-point mode from a computer using an Ethernet or USB connection, or Remote Network Device mode over an IP network.

To ensure fastest measurement rates, it is preferred to connect the WaveAnalyzer directly to the user's computer via a Gigabit Ethernet connection using the point-to-point mode.

Trigger scheme

The WaveAnalyzer 1500S includes a trigger scheme which allows taking measurement samples in precisely defined time windows. This enables, for example, taking spectral measurements of signals traveling in recirculating loops.

HTTP based programming interface

The WaveAnalyzer 1500S offers an HTTP based programming interface. This greatly simplifies remotely controlling the instrument, as it is independent of the programming platform.

Web server

The WaveAnalyzer instrument includes a simple web server which allows controlling the instrument and taking measurements with a web browser.
