

Innovation in Control Panel Building

New Value For Control Panels

Control Panels: The Heart of Manufacturing Sites

Recent evolution of control panel design and manufacturing is benefiting panel builders as well as end users and machine builders, resulting in evolution within production facilities that reduces total cost of ownership.

With the goal of making panel manufacturing simpler and more efficient, we have innovated new techniques and technologies for panel design, panel manufacturing processes, and wiring. Our Value Design for Panel concept guides the development of control panel products that reduce time and labor costs, power consumption, and control cabinet size.

Value Design for Panel Concept Advantages

Specifications for Value Design products focus on uniform mounting height and depth, reduced overall volume and side-by-side mounting to make room for more components. Wiring capabilities without tools using front access Push-In Plus wiring terminals decreases installation time.

A panel built around Value Design Concept products provides competitive advantages for panel builders, machine builders and end users. Combining multiple products that share the Value Design concept increases the value to all stakeholders involved with control panel design and use.

NEW

Add More Devices

AND Side-by-side mounting is possible for each model at an ambient temperature of 55°C. You can install devices without wasting space.

Downsizing Control Panels

We'll help you downsize control panels by reducing the width between wiring ducts and dead space.

* This is in comparison with previous OMRON products.

Previous The different heights create a lot of dead space.

NEW Dead space is reduced and the width between wiring ducts is optimized.

Control Panels That Resist Vibration

You can use Push-In Plus Terminal Blocks (refer to page 8.) to create robust control panels that withstand vibration during shipping and operation.

Increase the Reliability of Mounted Devices

Uneven heat dissipation is reduced because air circulation is improved.

Reducing the temperature inside the panel increases product reliability, decreases the failure rate, and lengthens life expectancies.

Previous Differences in heights and depths create hot spots.

NEW The unified heights and depths help reduce hot spots.

Meet Customer Needs by Increasing Process Speed

Faster Designing When Reusing Designs

- Product heights and depths are unified, so an existing design can be easily reused.

The unified specifications let you easily customize panels for each customer.

- The wide range of products with unified specifications gives you a wider selection.

Work

Faster Wiring

Unified wiring methods and specifications help shorten delivery times.

- Easy-to-understand terminal positions enable more accurate work.
- Unified I/O terminal positions help you organize control panel wiring and reduce the need of reworking.

- Greatly reduce wiring work with Push-In Plus Terminal Blocks.
- Retightening is not required for Push-In Plus Terminal Blocks.

Faster Shipping to Destinations Abroad

Value Design products are certified for CE, UL, and CSA.

Easy Wiring

Push-In Plus Terminal Blocks let you finish the wirings just by inserting wires.

What Are Push-In Plus Terminal Blocks?

Push-In Plus Terminal Blocks were independently developed by OMRON for easy wire insertion and firm wire holding ability. It's as easy as inserting to an earphone jack. No tools are required. They help reduce the time and work involved in wiring.

■ Easy to Insert

OMRON's Push-In Plus terminal blocks are as easy as inserting to an earphone jack. This reduces the load on worker's fingers.

■ Held Firmly in Place

Even though less insertion force is required, the wires are held firmly in place. The advanced mechanism design technology and manufacturing technology produces a spring that ensures better workability and reliability.

IEC standard (cable diameter)	Push-In Plus terminal block	Screw terminal block
20 N min. (AWG20, 0.5mm ²)	125 N	112 N

* Information for Push-In Plus terminal blocks and Screw terminal blocks is based on OMRON's actual measurement value data for the XW2R.

■ Work with Both Hands

Optimized shape to hold the screwdriver was created by the resin parts and the spring. Work goes smoothly when connecting stranded wires directly to the terminal because it's easier to aim at the desired terminal.

■ Wiring Possible with Stranded Wires

You can insert wires with ferrules or you can also insert stranded wires.

Examples of the Benefits of Value Design

Comments from Customers That Are Hoping to Add New

Downsizing Control Panels

- Downsizing is our highest priority. The usage of Push-In Terminal Blocks will be an effective measure to downsize control panels (company A).
- We need to downsize control panels, so side-by-side mounting at an ambient temperature of 55°C is appealing (company B).

Saving Space

- Our users often request to add devices. We often directly mount devices in available space, so saving space in control panels is great (company C).

Reducing Dead Space/ Making More-advanced Control Panels

- The number of devices used in control panels is increasing due to more advanced and more composite machine functionality. Devices with the same size will reduce work required for layout design inside control panels.

Main Features of Value Design

- Unified slim size.
- Side-by-side mounting at an ambient temperature of 55°C. (Applicable only within the same series.)
- Push-In Plus terminal blocks are used. (Expect for some products)
- Front-in and front-release wiring.
- Certification for CE, UL, and CSA.

Value to Their Control Panels

Vibration Resistance and No Need for Retightening

- I'm considering using push-in terminal blocks because of **screws that are loosened by device vibration** cause problems (company E).
- I want to use push-in terminal blocks to **eliminate managing screw tightening torque and retightening work after shipping.**

Reducing Wiring Work

- I'm considering push-in terminal blocks to **increase the speed of wiring work.**
- The push-in terminal blocks with less insertion force **increase wiring speed** (company G).

Reducing Design Work and Increasing Speed for Exporting

- We give **priority to UL-listed components.** That makes **UL recognition more efficient** (company I).
