

3M Science.
Applied to Life.™

**From our labs
to your life.**

**Science is just science
until you make it do
something, change
something—
improve something.**

At 3M, we believe the right science applied the right way touches people worldwide, generating breakthroughs that make your lives better, easier and more complete.

**In your work, in your home, in your
life—from smartphones to cars—
3M Science is everywhere.**

We apply our science to solve your biggest and smallest challenges. You'll find us enabling the delivery of electricity to the world's urban centers, facilitating connectivity for society's critical data centers, helping prevent infections, protect wounds and restore healthy smiles, and boosting the brightness of the screens in your connected life.

And so much more.

Each day we're building, growing and working together to generate the next best thing again and again.

Asking 'what if' is our way of life.

This is what drives us. In labs, offices, research centers and with our customers around the globe, we go to work on one thing—making life better for everyone.

Science is in our DNA.

We are a company of curious minds and problem solvers working together to meet the needs of our customers and the world around us. We embrace the creativity and risk taking it takes to make progress.

Through financial support, volunteering and educational outreach, we're inspiring communities all over the world to achieve more. And with ongoing sustainability initiatives we're committed to improving our business, our planet and every life.

We are 89,000+ global citizens living a passion for applying science to life.

**You're rarely more than 10 feet away
from 3M Science.**
